

UNLEASHED

With your app fully integrated with Unleashed, users can experience the seamless workflow of a fully integrated solution.

The API Integration allows you to connect to the NPF portal -

- NPF pulls orders from Unleashed
- NPF pushes tracking numbers to Unleashed
- NPF updates available stock on hand to Unleashed

Requirements from Client in order to integrate with NPF.

1. API ID

2. API Key

Order Filters that can be applied are as below:

Order Start Date: - This is the date that the client would like to start sending the Live orders for shipment. This will start from 12AM on a particular date. We cannot apply a particular time to pull the orders; hence it is just the date that is captured.

Prefix of the order: - We can apply a prefix to the order numbers coming in from Unleashed. For instance, if the order number from Unleashed is 101 then we can add a prefix like UNL. On the NPF portal this order will be UNL101. Sometimes a client can have multiple stores on Unleashed, the prefix helps to differentiate the orders from each site. For instance, if site 1 has order 101 and site 2 also has order 101 then

prefix applied can be

Site 1 -UNL

Site 2 -UNL2

Hence the orders in the NPF portal will appear as

Site 1 -UNL101

Site 2 -UNL2101

Order Status: - Statuses an order can go through are

- **Park:** Default setting. If you want to add or update details before sending to the customer, you can keep the sales order in a Parked status.
- **Backorder:** If not all ordered products are available in stock, you can save the order with Backorder status.
- **Place:** The order is saved with a Placed status. The order must be picked and packed before it can be completed.
- **Complete:** When all details are entered, and no further changes are required, you can complete the sales order. The sales order details will be sent to the integrated accounting provider.

Country Filters: - using this feature we can always update the countries from which the client wishes to receive the orders.

Stock Updates – NPF can push the stock levels to the client Unleashed cart. There are two options

- SOH Quantity – This is the actual physical stock at the warehouse.
- Available SOH Quantity – This is the Quantity, after deducting the orders from the SOH/ Ready for Process stage/ Back orders if any

This happens once the orders are processed and shipped on our end.

Test Orders to be created using the following test items to test the full integration

These are test items, we will not physically dispatch them during the testing process.

Item Code	Description
NPF001	This is Test Item 1
NPF004	This is Test Item 2
NPF005	This is Test Item 3

NPF will pull orders in their specified order status.

NPF will create the shipment for the order products with tracking numbers to unleashed once the orders are shipped.

To update the shipping company, create the following shipping company names. (Australia Post, TNT, NZ Post, StarTrack, DHL)

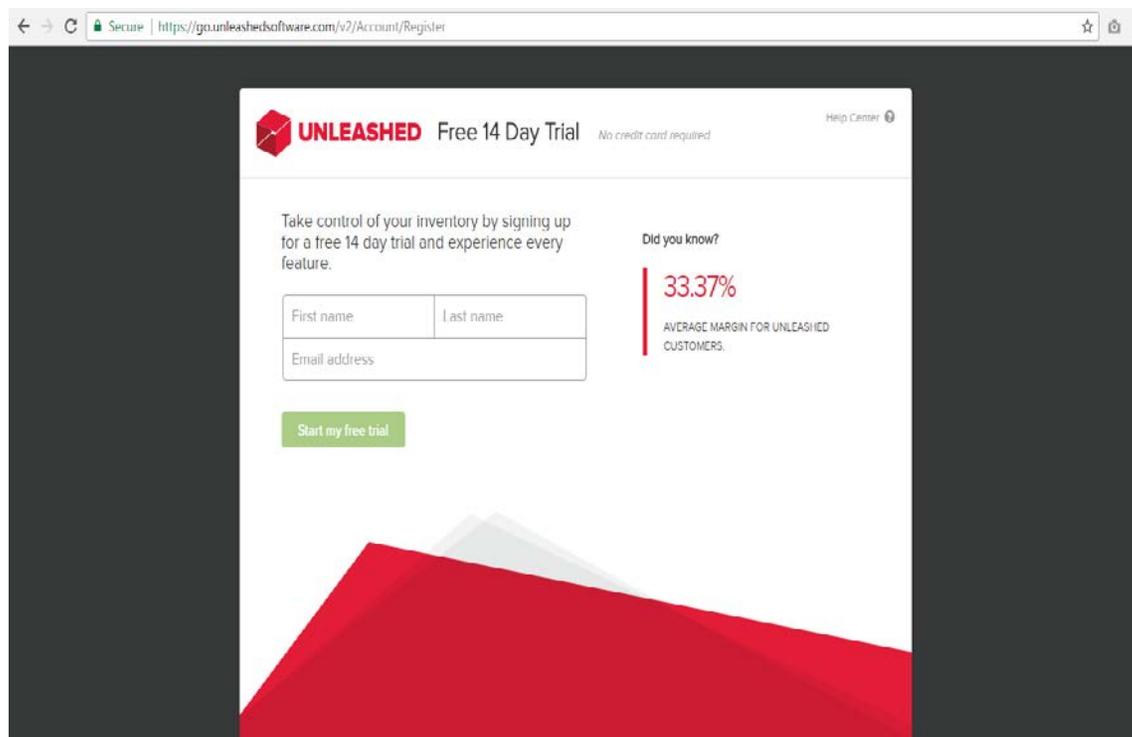

After creating the shipment, Unleashed order status will also update as Completed.

The above Pull and push will take place at frequent intervals.

Unleashed API Integration

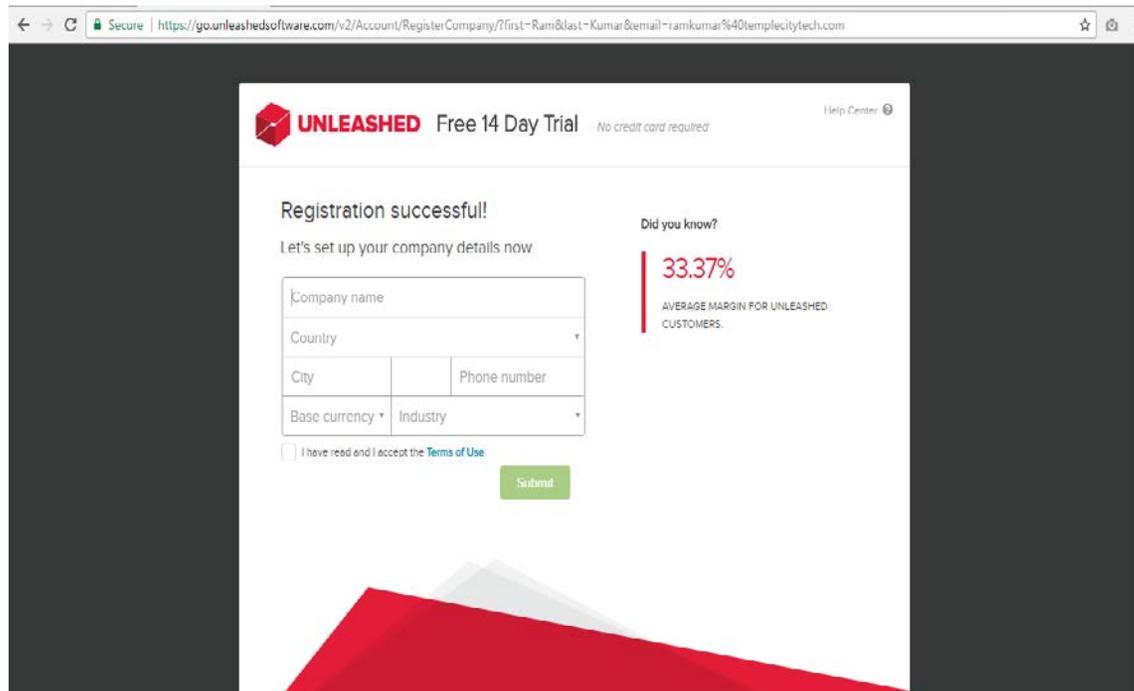

1) Creating New Store.

To create a new store visit <https://ap.unleashedsoftware.com/v2/Account/Register>

The screenshot shows a web browser window with the URL <https://go.unleashedsoftware.com/v2/Account/Register>. The page features the Unleashed logo and a "Free 14 Day Trial" offer with the note "No credit card required". A "Help Center" link is visible in the top right. The main content area includes a registration form with fields for "First name", "Last name", and "Email address", and a green "Start my free trial" button. To the right of the form, a "Did you know?" section displays "33.37%" as the "AVERAGE MARGIN FOR UNLEASHED CUSTOMERS". The page has a dark background with a red geometric shape at the bottom.

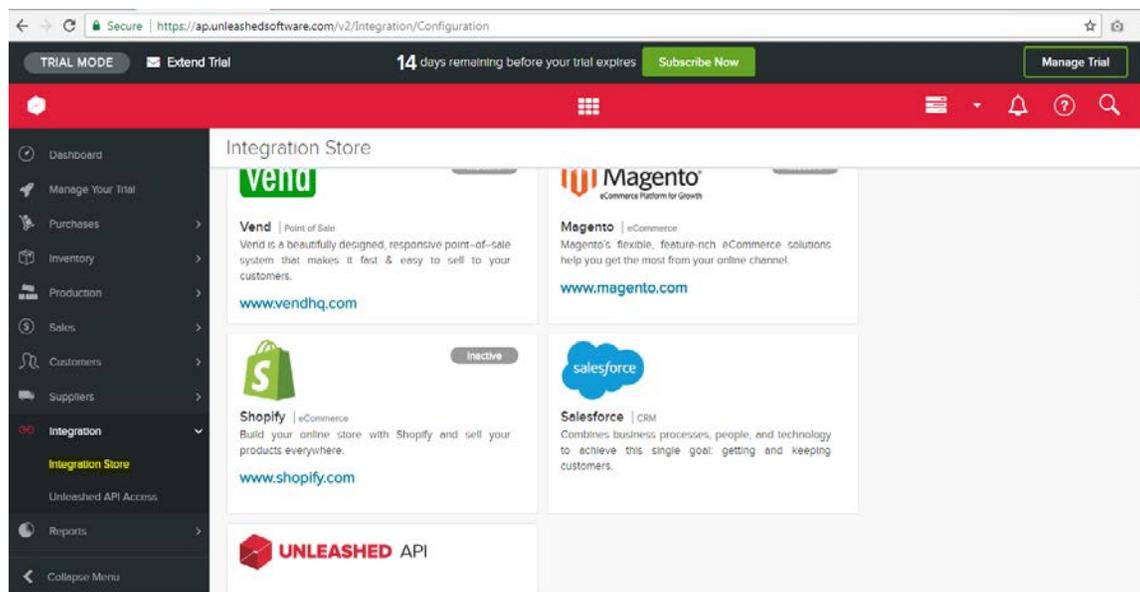

Create a store with the required details.

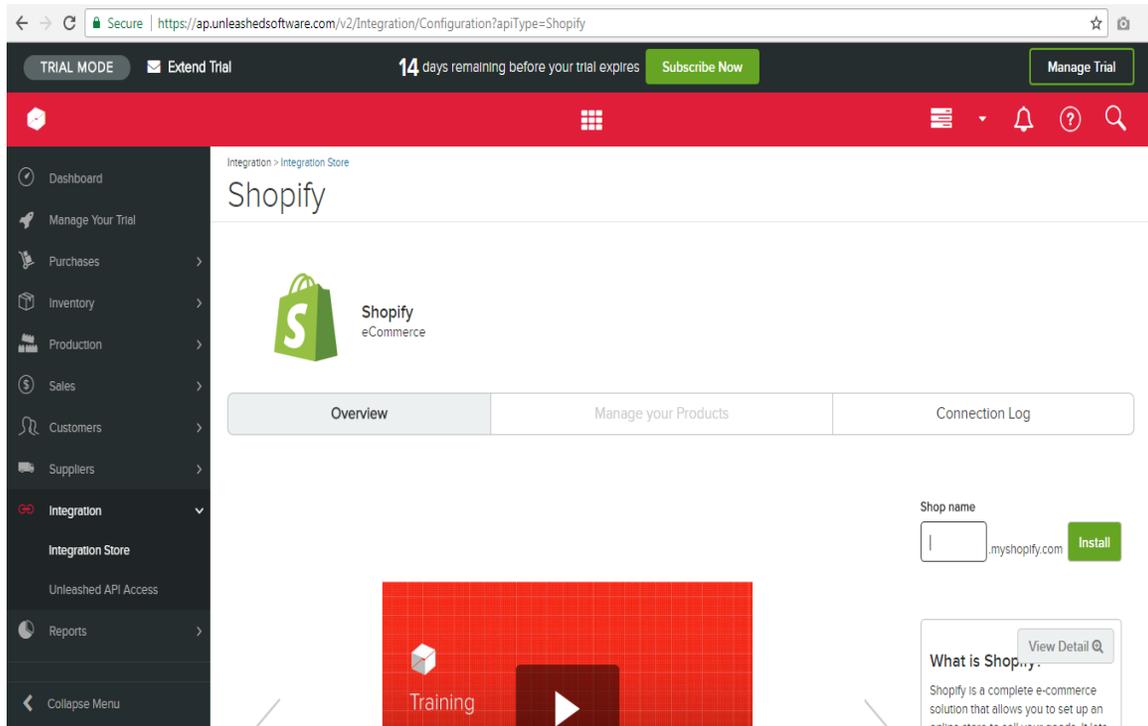

2) Add Existing Shopping cart

To add an existing shopping cart in unleashed dashboard menu

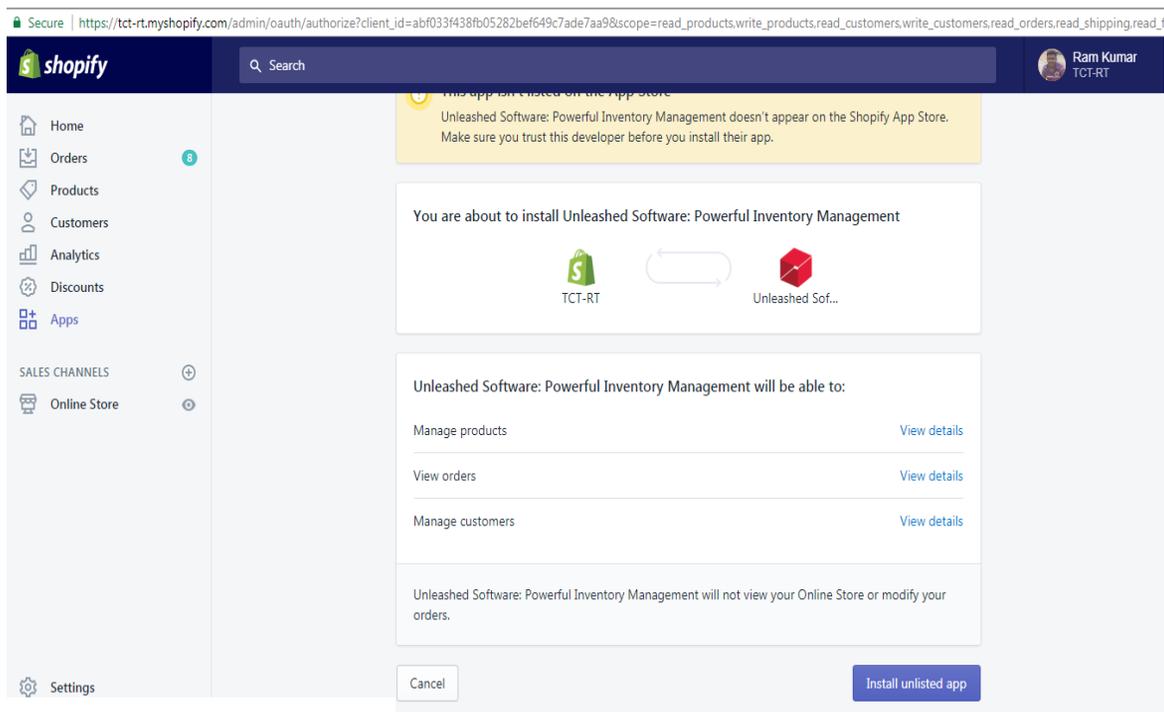

select Integration -> Integration Store and select the shopping cart.

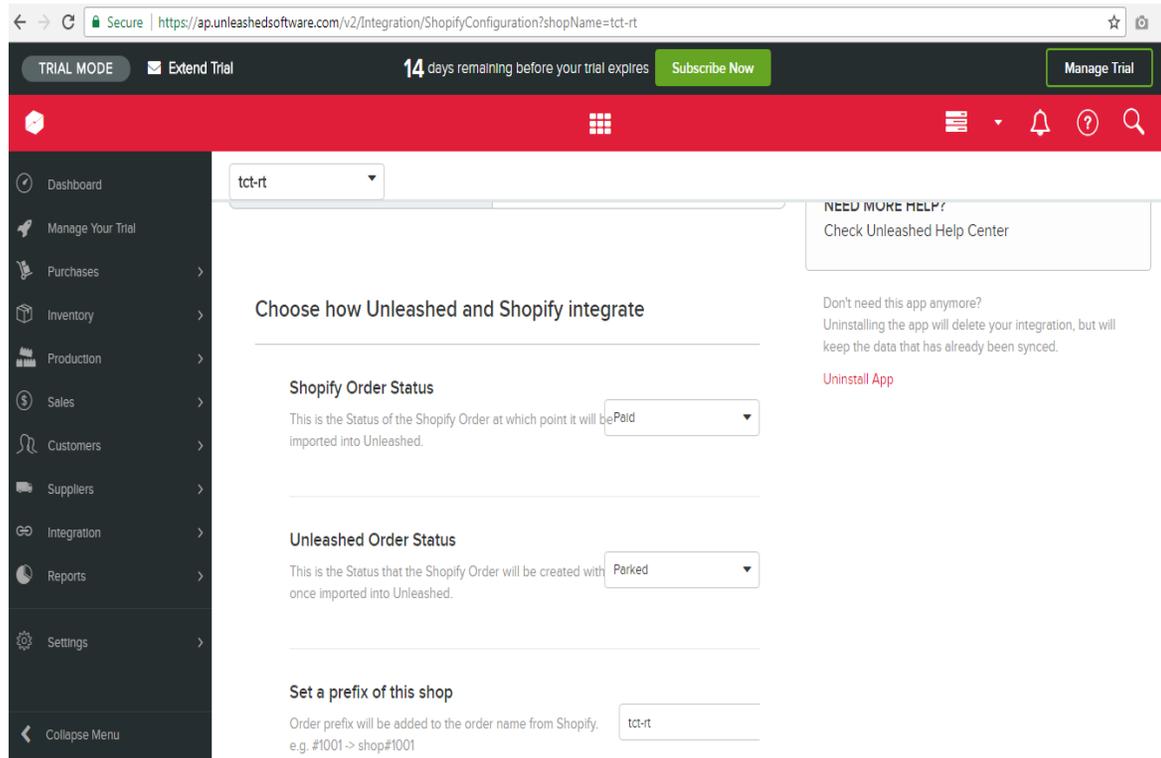

To add Shopify, enter the shop name and click install. (same set up for any other shopping carts)

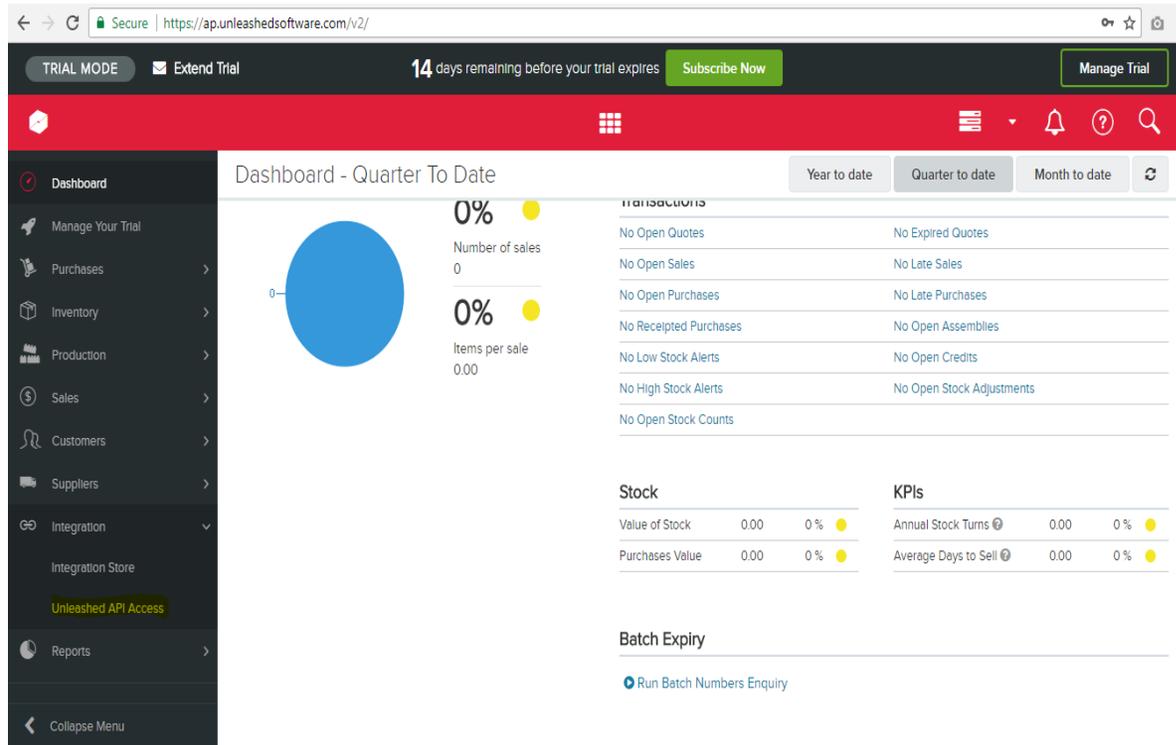

It will require to install the unleashed app in your Shopify store.

And enter the configuration settings in unleashed.

3) Create API Key – To get the API Id and API Key, select Integration -> Unleashed API Access-Menu

4) Copy the API ID and API Key, send this to NPF team.

The screenshot shows a web browser window with the URL <https://ap.unleashedsoftware.com/v2/Integration/API>. The page is titled "Unleashed API Access" and is part of the "Integration" section. The top navigation bar includes "TRIAL MODE", "Extend Trial", "14 days remaining before your trial expires", "Subscribe Now", and "Manage Trial". The left sidebar menu lists various sections: Dashboard, Manage Your Trial, Purchases, Inventory, Production, Sales, Customers, Suppliers, Integration (selected), Integration Store, Unleashed API Access, Reports, and Collapse Menu. The main content area features a light blue box with the heading "Unleashed API" and a paragraph explaining that the API is linked to the Unleashed web application and that demo accounts are allowed. Below this, the "Your API Id:" is displayed as `24dc49bf-bb38-4f9b-b6fa-f68dda8bcd3f` and the "Your API Key:" is displayed as `h2ix16k3RQGs6XKTcTlLvPPfISxUJqzVanvt4HEjh8Amr9HjW8ZoOtXEGbIQM0rJC8rVZyzedDBepI9qghtvuw==`. The right-hand panel contains a "Need Help?" section with a link to the Unleashed API Documentation website and an "API Website" button. Below that is an "API Usage" section showing a progress bar at 0.00% with a maximum of 125000 and a "Contact Us" button.
