

**CS-Cart** is flexible and customizable PHP shopping cart software with lots of great features to manage online business with maximum ease and comfort.

The API Integration allows you to connect to the NPFullment Logistics Platform-

- Pull orders from CS-Cart client site
- Push tracking numbers back to CS-Cart from NPFullment
- Push the SOH (Stock on Hand) quantity back to the client site
- Push the Available Stock on Hand quantity (Optional)

Requirements from client in order to integrate with NPFullment.

- Store URL
- API Key
- API User Name
- User ID

### **Finding CS-Cart API credentials**

#### **1. Login to CS-Cart**

- a. Click **Customers > Administrators** at the top

#### **2. Edit API settings**

- a. Select a user with administrator type
- b. Copy **Email** as you will need it to input in AfterShip
- c. Click **Gear Icon > Edit**

#### **3. Enable API**

- a. Click **Yes, allow this user to use the API**
- b. Copy **API User Key**

**Testing Criteria:** Test orders to be created using the following test items to test the full integration. These are test items and we will not physically dispatch them during the testing process

Test001 / Test002 / Test003

**Order Filters that can be applied are as below:**

**Order Start Date:** - This is the date that the client would like to start sending the live orders for shipment. This will start from 12AM on a particular date. We cannot apply a particular time to pull the orders; hence it is just the date that is captured.

**Prefix of the Order:** If the client wants to give any prefix with their order number then they can use this field. For example 1000012 is the order number and the client gives CS as the prefix in the master setting then the order will imported like this CS1000012.

**Order Status:** - Statuses an order can go through are

Processed, Complete, Open, Failed, Declined, Back Ordered, Cancelled,

**Tracking Number Updation:**

After the lodgement is finished we update the tracking number back to the Client's site in frequent intervals. Tracking number, carrier name and tracking URL will be updated along with tracking number.

Order status will be updated after the tracking number update, based on the master setup.

If the shipped status is required to be updated then the status is given in the text box and the given order status will update after the order is fully shipped.

If the partially shipped status is required to be updated then the status is given in the text box and the given order status will be updated, in this case the order is a backorder.

If both options are not selected then order status will not be updated at the time of tracking update.

**Country Filters:** - using this feature we can always update the countries from which the client wishes to receive the orders.

**Stock Updates** – NP Fulfillment can push the stock levels to the CS-cart. There are two options

- SOH Quantity – This is the actual physical stock at the warehouse.
- Available SOH Quantity – This is the quantity that is got after deducting the orders from the SOH/ Ready for Process stage/ Back orders if any

This happens once the orders are processed and shipped on our end.

### **FAQ's**

- 1. How do we obtain the API Credentials? (ANS) Provide the client with the steps from above.**
- 2. Can we update the available stock as 0 instead of negative value? (ANS) yes we can do this for you**
- 3. What are the different order statuses that can be pulled by NPF from CS cart? (ANS) Processed, Complete, Open, Failed, Declined, Back Ordered, Cancelled,**
